

SAKET RANJAN

Tech Lead | Solution Architect | Senior Java Engineer

☎ +91-9309177135 ✉ saket.ranjan2407@gmail.com ■ Pune, Maharashtra, India

PROFESSIONAL EXPERIENCE

Software Development Specialist → Tech Lead

Accenture | AT&T; / OLPS Account

■ 12/2021 - Present ■ Pune, India

■ Payment Channel Migration - AT&T; Fiserv Commerce Hub

Technologies: Spring Boot, Spring Data JPA, Redis Cache, Confluent Kafka, Microservices, GenAI, Agentic AI (GitHub MCP server)

- Led full migration of AT&T's enterprise payment channel from legacy CyberSource APIs to Fiserv Commerce Hub - covering new charge, refund, cancel-auth, and settlement flows. Decomposed monolithic payment processing into a distributed, fault-tolerant microservices architecture while integrating GenAI tooling to accelerate delivery
- Tech Lead collaborating directly with AT&T and Fiserv stakeholders for requirement gathering, solution design, and API contract definition
- Designed and delivered end-to-end Fiserv Commerce Hub integration (auth, settle, reversal, refund) replacing all legacy CyberSource payment flows
- Engineered distributed microservice architecture using Saga, Circuit Breaker, and Outbox patterns for transactional consistency and resilience
- Integrated Generative AI and Agentic AI workflows via GitHub MCP server - reducing code scaffolding time by ~40% and improving domain-specific code accuracy with Copilot
- Developed and deployed AT&T in-house AI models to contextualize business logic, enhancing co-pilot accuracy for payment APIs
- Led code reviews, architectural decisions, and technical mentoring; championed CI/CD hygiene and deployment reliability across the team

■ CAPM-BSSE: PAM REST API & Azure Cloud Transformation

Technologies: Java 8, Spring Boot, Microservices, RESTful Web Services, PostgreSQL, Azure App Services, Kafka, Docker, Kubernetes

- Spearheaded re-engineering of the CAPM (Customer Account Payment Management) platform - converting all SOAP/EJB APIs to RESTful microservices and migrating from on-premises to Azure. Delivered a scalable, cloud-native architecture improving reliability and elasticity for AT&T's payment management
- Served as Tech Lead with end-to-end accountability for solution delivery, architecture, and performance of a 7-engineer team
- Architected SOAP → REST migration for 15+ payment APIs and EJB → Spring Boot re-platforming, eliminating monolithic coupling

- Designed Azure-native deployment topology: Azure App Services, AKS, PostgreSQL, with full CI/CD via GitHub Actions and Docker/Kubernetes
- Implemented microservices design patterns (API Gateway, Service Registry, Event Sourcing) to achieve fault isolation and horizontal scalability
- Reduced release cycle time by ~30% through CI/CD pipeline governance - streamlining build, test, and deployment cycles

Software Development Team Lead

Amdocs | AT&T; Account

■ 02/2016 - 12/2021 ■ Pune, India

■ Dashboard-CCTP Scripting: Azure Cloud Enablement

Technologies: Java 8, Spring Boot, Microservices, RESTful Web Services, PostgreSQL, Azure App Services, Kafka

- Led re-architecture of the call center scripting platform (CCTP) used across AT&T's Southwest and West regions. Decomposed the monolithic application into microservices and migrated to Azure cloud, improving scalability and operational agility for thousands of call center agents
- Led a 13-engineer team as Tech Lead - overseeing architecture, delivery quality, and technical direction throughout the project lifecycle
- Designed monolith-to-microservices decomposition strategy; migrated 8+ independent services to Azure App Services with zero-downtime deployments
- Managed and optimized CI/CD pipelines, significantly reducing regression incidents and deployment cycle time

■ Bad Debt Fraud Reduction - Microservices Modernization

Technologies: Java 8, Spring Boot, Microservices, RESTful Web Services, Hibernate, Oracle DB, Docker, Kubernetes

- Modernized AT&T's payment platform to minimize bad debt exposure and combat payment fraud. Designed and built 10 independent microservices

implementing Payment Profile (AutoPay enrollment) and Create Payment (transaction processing)

- Architected and delivered 10 independent payment microservices covering AutoPay enrollment, transaction processing, and fraud signaling
- Applied Domain-Driven Design and SOLID principles to ensure modularity, maintainability, and testability across all services
- Led code reviews and quality governance; established unit test coverage targets and CI gate checks reducing production defects

■ Tokenization - API-based Payment Orchestration

Technologies: Java 8, Spring Boot, RESTful Web Services, Oracle, Kafka, Maven, CyberSource/Visa

- Engineered the Tokenization API orchestrating end-of-day payment operations across multiple payment methods for AT&T, integrating with CyberSource (Visa) for settlement and using Kafka for real-time notifications
- Built secure tokenization pipeline for end-of-day settlement with CyberSource/Visa - handling high-volume daily transaction aggregation reliably
- Leveraged Kafka for real-time event streaming to decouple payment notification flows and improve auditability
- Applied industry-standard API design patterns for resilient, maintainable, and high-throughput payment orchestration

■ PWMB & Cryptocurrency Payment Enablement

Technologies: Java 6, Multithreading, REST/SOAP, Oracle SQL, Jenkins, Agile Scrum

- Designed and developed payment solutions enabling AT&T customers to pay Mobility and DTV bills via Pay with My Bank (PWMB) and Cryptocurrency, expanding the company's digital payment portfolio
- Built secure integrations with bank ACH and cryptocurrency gateways - expanding AT&T's digital payment portfolio with new payment channels
- Led technical analysis of alternative payment channel integrations, driving requirements finalization with client stakeholders across Agile sprint cycles

■ Unix-to-Linux (U2L) - Mainframe Modernization

Technologies: Java 7, Oracle 11g, Pro*C, Shell Scripting, Linux, AIX

- Key contributor in mainframe modernization - converting COBOL-based systems to Java 7 and migrating 300+ AIX-resident batch jobs to Linux, reducing infrastructure costs and improving operational reliability
- Migrated 300+ batch jobs from AIX to Linux - ensuring seamless recompilation, job reruns, and environment-specific optimization
- Converted COBOL → Java 7 for core business modules, preserving full functional parity while modernizing the codebase
- Supported system integration and post-migration stabilization with cross-functional teams to meet business continuity and performance targets

Software Developer

Datamatics Global Services Limited

■ 02/2015 - 01/2016 ■ India

- Contributed to Java-based enterprise application development across the full SDLC. Built foundational skills in J2EE, web services, and Oracle database programming within a professional services environment

EDUCATION

B.Tech - Computer Science & Engineering

SRM University, Chennai

- Graduated 2012

Industrial Training - Java Enterprise

HCL CDC

- 6-month Java-based project training

PROFESSIONAL SUMMARY

Senior technology leader with 11.5+ years delivering enterprise-scale Java/Spring Boot platforms for AT&T across payment modernization, cloud migration, and microservices transformation. Proven Tech Lead with direct experience architecting distributed systems, leading cross-functional teams of up to 13 engineers, and driving full SDLC delivery from requirements to production. Currently integrating Generative AI and Agentic AI (MCP servers) into engineering workflows to accelerate delivery

velocity. Holds Microsoft Azure certifications (AZ-900, AZ-203) and deep expertise in payment platforms (Fiserv Commerce Hub, CyberSource, Tokenization, AutoPay), cloud-native architecture on Azure, and modern microservices design patterns

TECHNICAL SKILLS

Core Java Platform

Java 8/11/17

J2EE

Spring Boot

Spring Data JPA

Multithreading

Collections

Streams

Hibernate

Architecture & Design

Microservices

System Design

GoF Design Patterns

SOLID Principles

DDD

UML

API Design

MVC

Messaging & Streaming

Apache Kafka (Confluent)

Redis Cache

Event-Driven Architecture

Async Messaging

Cloud & Infrastructure

Microsoft Azure (AZ-900, AZ-203)

Azure App Services

AKS

Docker

Kubernetes

Linux

DevOps & CI/CD

GitHub Actions

Jenkins

Maven

Git

SVN

SonarQube

Postman

JIRA

Databases

Oracle 19c

PostgreSQL

SQL

Oracle 11g

Web Services & APIs

RESTful APIs

SOAP/WSDL

Tomcat 9x

Apache HTTP

SoapUI

GenAI & Agentic AI

GitHub MCP Server

Claude Code

GitHub Copilot

Generative AI Integration

AT&T; AI Models

Sprint Planning

Backlog Refinement

TDD

Code Review

Pair Programming

CERTIFICATIONS

AZ-900: Microsoft Azure Fundamentals

Microsoft Certified | Active

AZ-203: Microsoft Azure Developer Associate

Certified Scrum Practitioner

Scrum Alliance | August 2014

Generative AI & Agentic AI (MCP Servers)

Practical - GitHub MCP, Claude Code, Copilot | 2024-Present

ACHIEVEMENTS & RECOGNITION

- Value Award - Amdocs**
Recognized for outstanding performance and high-impact contributions to AT&T; delivery
- Spot Award x2 - Amdocs**
Awarded twice for exceptional individual contributions exceeding expectations on critical deliveries
- Hackathon First Prize - Amdocs**
Won first place in the internal hackathon for an innovative technical solution
- Innovation Council - Amdocs**
Selected as a key member driving adoption of emerging technologies and continuous improvement culture
- Tech Summit Speaker**
Presented technical papers at internal summits, earning accolades for research depth and real-world impact
- Ahead-of-Schedule Delivery**
Recognized by senior management for leading critical projects delivered ahead of schedule, driving client satisfaction
- Mentorship Impact**
Mentored 10+ junior engineers and interns, significantly enhancing team productivity and fostering a growth culture
- Consistent Top Ratings**
Achieved top performance ratings across multiple annual appraisal cycles for technical expertise and delivery excellence
